A reflexive loop is the closed polygonal path joining successively a sequence of lattice points  $i \in \mathbb{Z}^2$ , i = 1, 2, ..., m such that:

(x) Pi, Pi+1 is a basis of  $\mathbb{Z}^2$  for i=1,2,..., m

(we take indices modulo n so that  $P_{n+1} = P_1$ ).

Example

For the moment we will also assume the loop is convex and circles always counterclockwise. Let us call it countive

An equivalent formulation of (k) is:

(\*') the triangle 0, Pi, Piti has area 1/2

(x') the triangle 0, Pi, Piti has area 1/2

cquivalently, by Pick's theorem, it contains no other

lattice point.

Given a reflexive loop we may form its dual I\*
by taking the polygonal path joining the tangent
by taking More precisely:
vectors. More precisely:

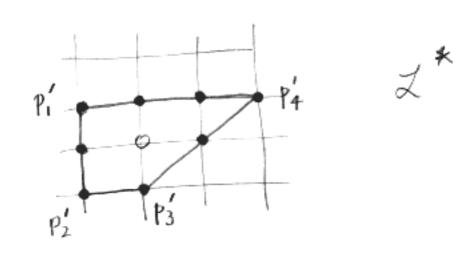

Let  $p_i' = p_{i+1} - p_i$  i = 1, 2, ..., n then intercalating between the  $p_i'$ 's any lattice intercalating between the  $p_i'$ 's any lattice point on the segments joining  $p_i'$  and  $p_{i+1}$  point on the segments joining  $p_i'$  and  $p_{i+1}$  we obtain a new reflexive loop  $\mathcal{J}^*$ .

A reflexive loop determines a closed path in R2 > 30) and has, therefore, a well defined winding number w(x).

## Theorem

- (1) It is a reflexive loop, which is positive if I is.
- (2) (L\*)\* is the reflection of L through the origin

(3) 
$$\# \partial Z + \# \partial Z^* = 12 W(Z)$$

Notice that duality gives

vertices indes pides ex vertices

When I is a positive reflexive loop of winding number 1 we may associate to it a tonic surface and in fact non-singular.

Noether's finla (a special case of the Hirzebruch. Riemann-Roch theorem) gives the identity

12 (1+Pa)=K2+C2

and in our case these have the values  $Pa = 0 K^2 = \# \partial \mathcal{L} C_2 = \# \partial \mathcal{L}^*$ 

Q: What happens in the ease w(Z)>1 with this interpretation?

Hamiltonian mechanics

sequence of

sequence of

Think of the polygonal path as a pairs of vectors

in  $\mathbb{Z}^2$  with det=1;

where p is the position and q the momentum.

where p is the position and q the momentum.  $p = some p_j \in \mathcal{X}$ (i.e a direction)  $p \land q = 1$ we are them right

We more from one pair to the other by either one of the following:

A: 
$$\begin{cases} P & \longrightarrow & P+q \\ 2 & \longrightarrow & q \end{cases}$$

$$\begin{cases} 1 & 1 \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 2 & \longrightarrow & q \end{cases}$$

$$\begin{cases} 1 & 1 \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0 & 1 \end{cases}$$

$$\begin{cases} P & \longrightarrow & P+q \\ 0$$

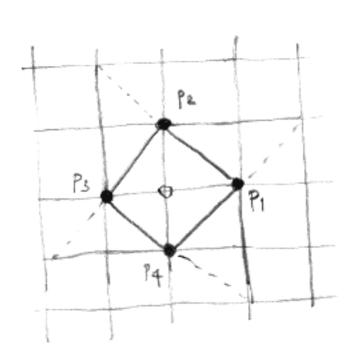

So we may describe a reflexive loop (modulo  $SL_2(\mathbb{Z})$ ) by a sequence

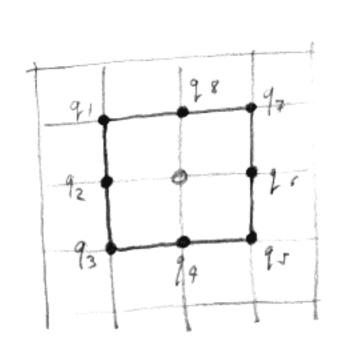

$$SL_{2}(Z)$$
  $A^{a_{1}}B^{b_{1}}...A^{a_{N}}B^{b_{N}} = id$ 

$$A^{a_{1}}B^{b_{1}}...A^{a_{N}}B^{b_{N}} = id$$

$$(V = \# \text{ vertices of } Z \text{ or } Z^{*})$$

## Example

(P1, 91) (P2, 91) (P2, 92) (P2, 93) (P3, 93) (P3, 94, (P3, 95).

AB2AB2AB2=id

In fact we a Noop in  $S_2(Z)$ . L

Consider

t +> (1t)  $\widetilde{\not} = \vdots$ 

+ € [0,1]

t +> (-t1)  $\widetilde{\mathbb{S}}$  :

Let us normalize things so that

 $(p_1, q_1) = (0)$  polygonal Z in  $Sl_2(Z)$ We have then a path Z in  $Sl_2(Z)$ 

described by

ð B° ... ð B°

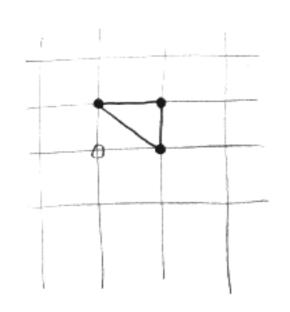

If we project I to the first row we get I if we project to the second 2.

This proves parts (D & (2) of the theorem and also shows the winding numbers of I, I are the same and equal the winding number of Z.

5L2(Z) Ã, B generate SL2(Z) (preimage of in universal cover of SL2 (R)) since A,B generate SL2 (Z).

1 -> SL2(R) -> SL2(R) >1

13TT (SI (D)) A home topy class of paths

Has winding number O. So we obtain the relation

$$\tilde{A}$$
  $\tilde{B}$   $\tilde{A}$   $\tilde{A}$ 

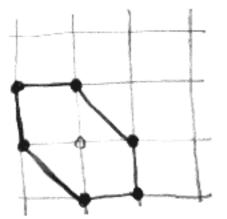

Hence the map

$$\Phi: 5L_2(\mathbb{Z}) \longrightarrow \mathbb{Z}$$

$$\widetilde{\beta} \longmapsto 1$$

is a well defined homomorphism.

On the other hand

$$Z \rightarrow (AB)^6 = id$$

更(よ)=12 an d has winding number 1

$$\sum_{i=1}^{N} a_i + \sum_{v \in Sihve} b_i = 12. W$$

Cor: There are fimitely many reflexive loops of (up to Strate)
